PRIORITY

IDEALIST/W - DM-4

REF: A. DTD 8 DEC 71

REC-107-B. DTD 8 DEC 71 - mission C-361-C

SUBJ: RFI "H" CONFIG

1. PERIODIC NOISE OF 16 SEC ON 1 SEC OFF DOES NOT CORRESPOND TO ANY RECOGNIZED CYCLE IN H CONFIG.

2. REF A REPORTS HIGH NOISE AT 0451, 0459 AND 0504. REF B NOTES H CONFIG IN MODE 1 FROM 0426 TO 0505. IN THIS MODE CONFIG IS UNCAGED BUT NOT CYCLING. NOISE IN THIS NON-OPERATE MODE WOULD BE SURPRISING.

3. AS WE READ REF A PARA 5, THE NOISE WENT AWAY AT 0543. PER REF B THE "H" CONFIG TURNED TO MODE OFF AT 0548. IS THIS CORRECT? PLEASE ADVISE.

4. NEW LIGHT WEIGHT "H" MOUNT HAS A GROUND STRAP FROM GIMBAL HOUSING WHICH IS TO BE CONNECTED TO VEHICLE. THE GROUND STRAP LUG SHOULD BE NEXT TO VEHICLE AT MOUNT ATTACH POINT AND SECURED WITH MOUNT BOLT. IT MIGHT BE NECESSARY TO CLEAN UP ATTACH POINT.
